

Paper Chicory

a project by Alice

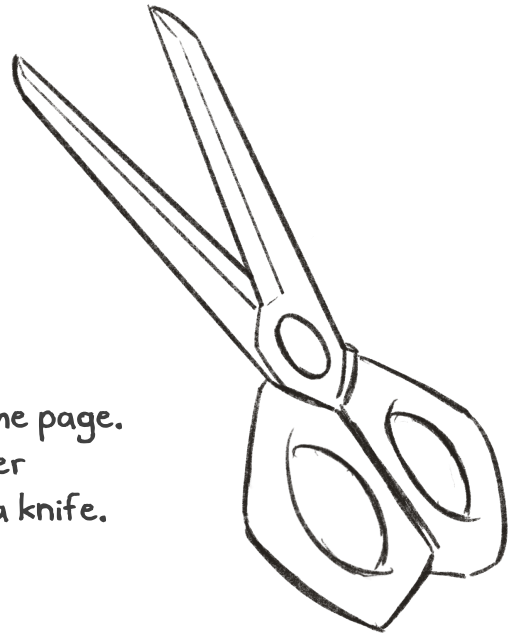

How to build

Step 1: Print

Any paper will do! For best results, I recommend something above 100g/m² A4 paper. The template only uses black and white, and is contained on two A4 pages.

Step 2: Cut

Cut out the pieces along solid thick lines, either with scissors or a craft knife. Watch out for sharp tools! If you're younger, please seek supervision.

Step 3: Fold

Fold the template, following the key from the page. You can make this easier by scoring the paper beforehand, with something like a folder or a knife.

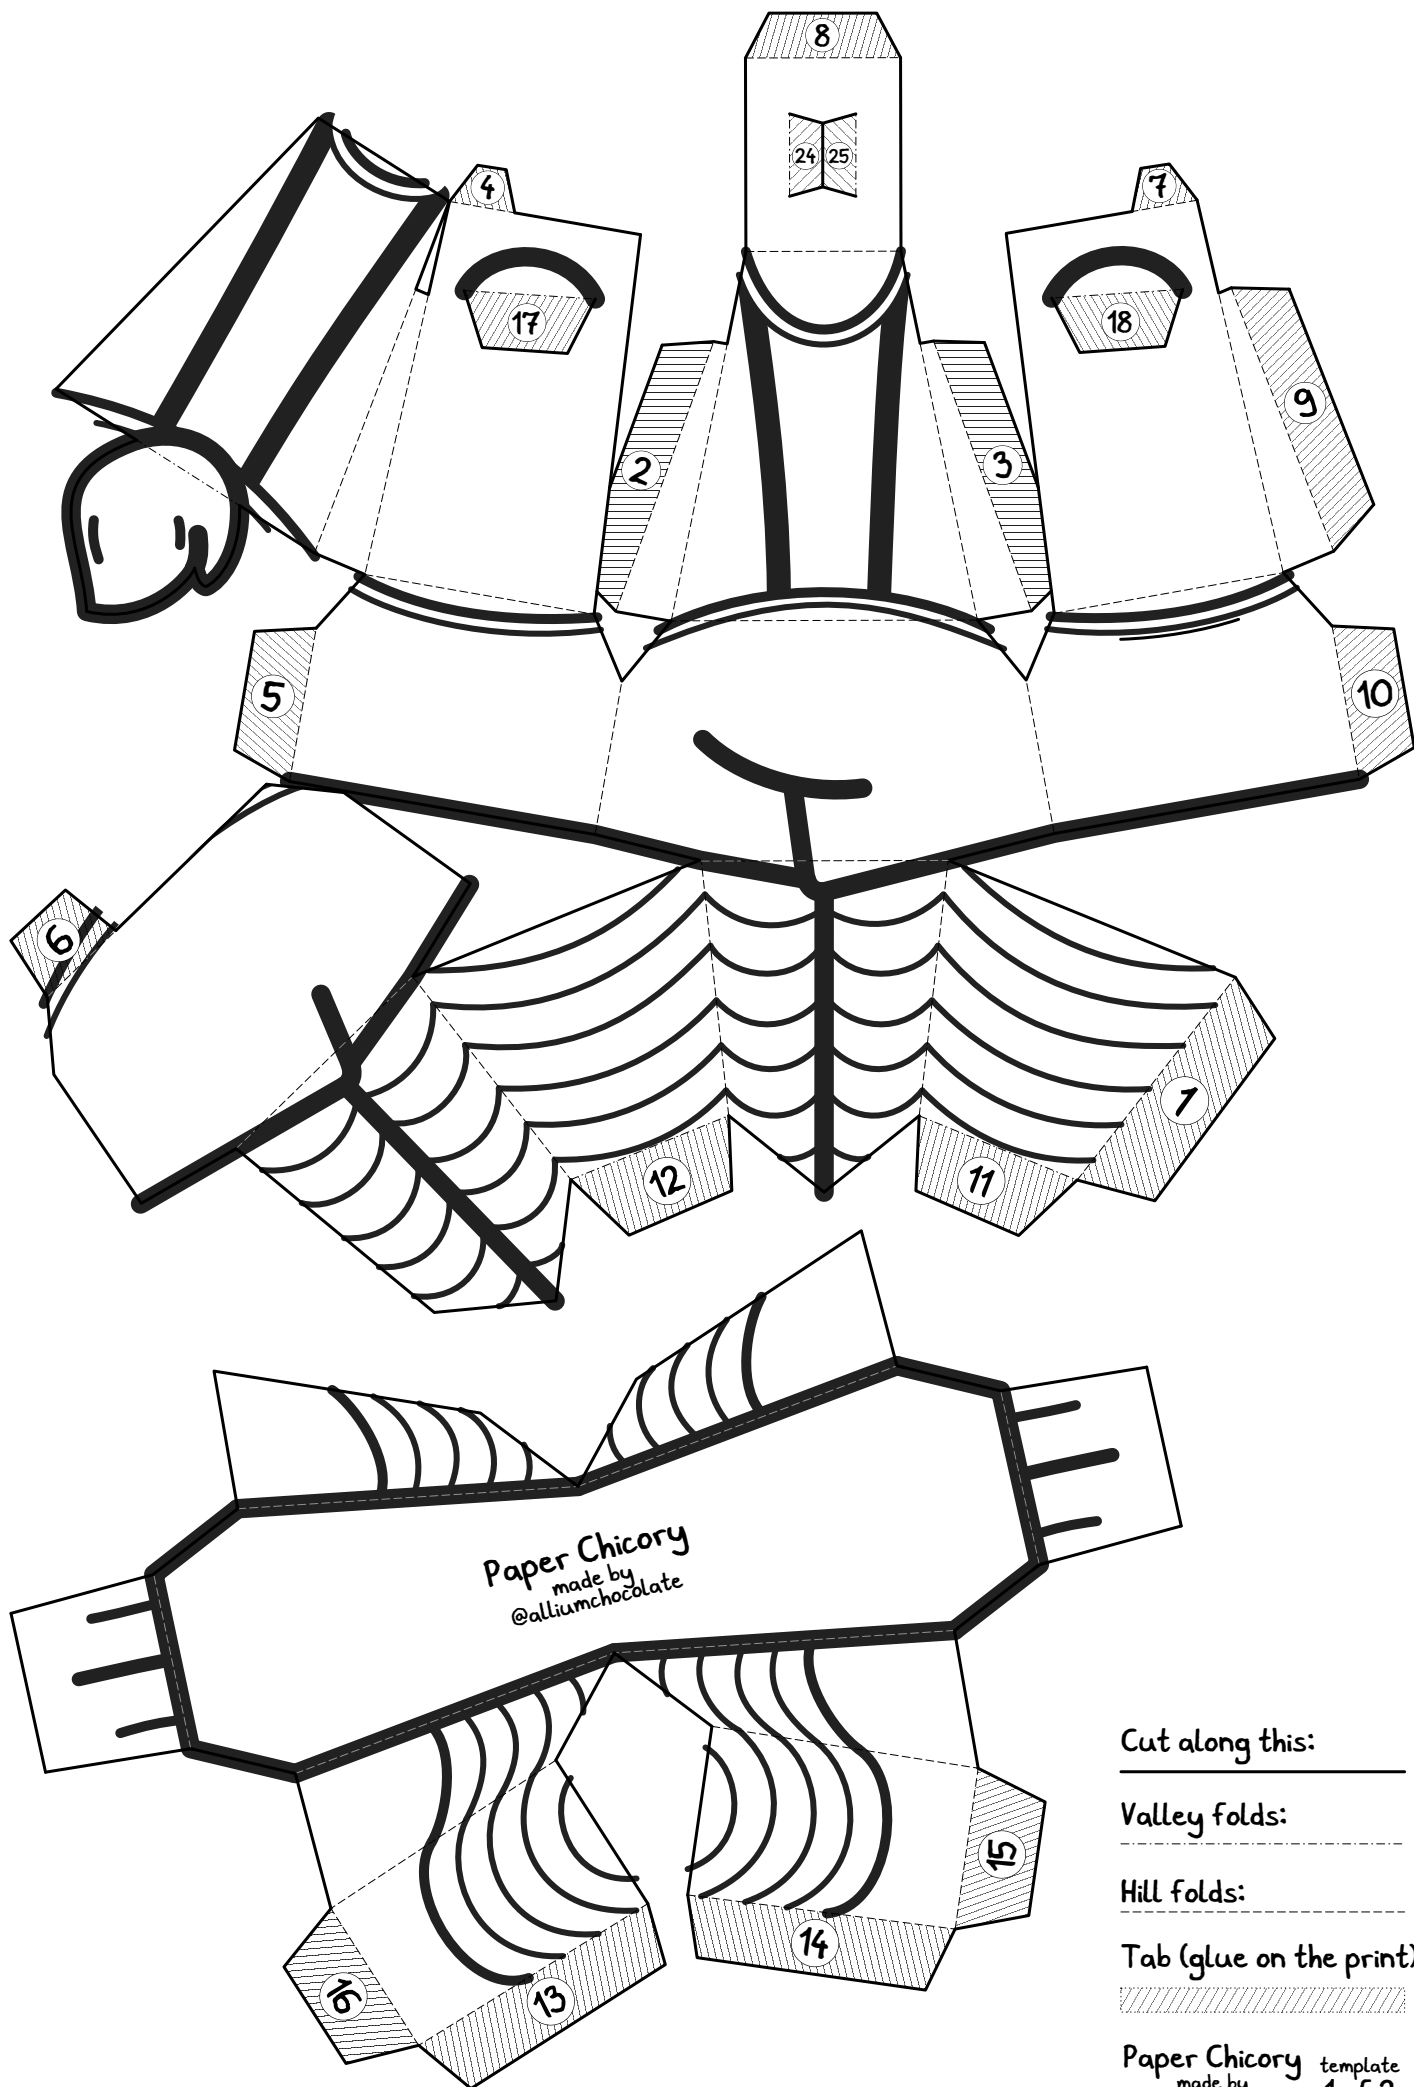

Step 4: Glue

Using any glue you have (or tape!), put glue on the tabs according to the key, and squish the paper together. Use photos or check before applying glue to know what to stick together. The tabs are numbered as a recommended order.

And that's it!

Thank you for building <3
